## Plans and Goals

This documentation outlines the goals and plans for creating a responsive portfolio website as a final requirement for the subject Intro to Computing. The website will serve as my personal portfolio, showcasing Home, About, Hobbies, Photos, and Contact. It will be fully responsive, meaning it will adapt to various devices such as desktop computers, tablets, and smartphones.

The primary objective is to demonstrate my knowledge of web development technologies and practices learned throughout the course, including HTML, CSS, and responsive design techniques.
