Documentation for UFC Website Development

Goal:

To create a responsive multiple page website for die hard **UFC** (**Ultimate Fighting Championship**)

fans, and for them to be able to watch their favorite fights and athletes for free!

Plan:

Website Structure:

▪ Structure the website with semantic HTML5 elements (header, footer, section, article, etc.) for

better organization and search engine ranking.

▪ Implement basic interactivity, such as form validation, animations, or dynamic content loading.

▪ Showcase featured content such as videos, images.

▪ Organize content in a visually appealing way.

Design and Aesthetics:

▪ Style the website using CSS Flexbox and CSS Grid for layout, media queries for responsiveness,

and hover effects for interaction.

▪ Optimize images for web use to reduce load time while maintaining quality.

▪ Customize font sizes and styles according to the importance of content on the page.

Testing:

▪ Functional testing ensures that all features of the website are working as expected. This includes

checking all interactive elements such as forms, links, buttons, navigation, and content display.

▪ Compatibility testing ensures the website works correctly across different browsers and devices.
